**INTERACTIVE BUILDINGS**  
WITH IP INTERCOM AND SPEAKERS

Our new Solution sheet for Building security makes it easy to get an overview of where STENTOFON products can be installed in a Building Security installation.

When you add IP intercom and speakers to your building, your building becomes interactive. Security guards can talk to people they see on the video system instantly, regardless of distance. If the person is lost or simply needs assistance, it is easy for the people in charge to communicate directly.

On the other hand, if a person has ill intent, security guards can interact and prevent an unwanted situation to develop. By combining audio, access control and cameras you get the ability to see, speak and listen. STENTOFON makes it simple to welcome, guide, help or warn people anywhere in the building or on the premises.
