CLEANROOM COMMUNICATIONS

JUROX
RUTHERFORD, NSW

THE SITE

Jurox, Australia's most innovative veterinary pharmaceutical manufacturer, is nestled in the picturesque NSW Hunter Valley. Jurox believes success comes through high quality and superior formulation.

Their dedication to customer service has proven to be a valuable asset to end-users, as word of mouth referral by veterinarians, breeders and rural sellers continues to grow. From this, Jurox has become a major player in the veterinary pharmaceuticals market and is rapidly becoming a well known name in the rural animal health market. Jurox now offers more than 120 proprietary veterinary and over-the counter lines to a diverse animal health market world-wide.

THE CHALLENGE

Jurox needed an effective, high quality clean room environment communication system in conjunction with their existing telephone system.

THE SOLUTION

The on-site SIP telephone system was utilised to provide the Intercommunication, Public Address and Evacuation services that Jurox required.

Featuring STENTOFON Clean Room Master Stations, with their sealed front foil for easy sterilisation, people from within the positive pressure clean rooms can communicate to people in the safe areas of the building. In the event of an emergency, employees can set off the evacuation system, causing all telephones and intercom stations to emit an evacuation tone, effectively warning all employees within the building, without allowing contamination to the work areas in the event of a false alarm.

THE OUTCOME

Communication between rooms, intercom to telephone and intercom to public telephone network is possible thanks to the easy integration of the SIP IP OR station and its state-of-the-art edge technology and design.

- Like all Vingtor-Stentofon stations, this IP OR station features superb audio quality. This is enabled through a set of advanced technologies such as active noise filtering, acoustic echo cancellation, wide band audio codec, and high power audio outputs.
