SOLUTION
DATASHEET

SCA IPTV INTEGRATED MULTICAST NETWORK TV SOLUTION

FEATURES

- Housed in vandal-resistant & anti-ligature protective enclosure
- Centralised network configuration & stable channel audio balance
- Supports customisable GUI and RSV widgets for privilege-based content

Low Operational Cost & Install Effort

No more reprogramming hundreds of set-top boxes

Full Admin Control Over Each Set

Push updates and upgrades en masse over IP in minutes

Communication Platform Capability

Deliver teletext-style notifications to individual cells and units

TECHNICAL SPECIFICATIONS

TAKE CONTROL OF YOUR DISPLAYS

Managing multiple displays across a corrections facility shouldn't mean running from screen to screen for every update. Whether you're overseeing two displays or a thousand, the CMND Display Management Platform puts you in control - from a single, central location.

Remote Network Management | CMND & Control

CMND & Control gives facility managers a straightforward way to oversee every display on the network. Set parameters, push software updates, and configure multiple screens simultaneously from wherever your team is operating.

Fast, Scalable Deployment | CMND & Deploy

Getting a large installation up and running quickly is critical. CMND & Deploy supports rapid setup through cloning and remote app installation, so your approved integrators can commission displays efficiently and move on.

BUILT FOR THE DEMANDS OF CORRECTIONS ENVIRONMENTS

The SCA IPTV solution is designed with the operational realities of corrections facilities in mind:

Resilient By Design

System reliability is architected at the IPTV head-end, not the individual screen level. Redundant streamers and failover software options mean a single point of failure won't take your entire network offline.

Centralised Configuration at Scale

Philips CMND enables mass updates and configuration changes across your entire display estate, eliminating the need for manual per-device intervention and significantly reducing maintenance overhead.

Site-specific Content and Interface Control

Customisable GUIs and RSV widgets allow facility managers to push location-specific information and apply privilege-based content profiles tailored to different areas or population groups within the facility.

Targeted Messaging Within Your Network

Direct messaging to individual displays or defined groups is fully supported, with local hosting ensuring compliance with corrections requirements around external connectivity restrictions.

Educational Content Integration

The solution can be packaged with an approved educational platform, providing a value-added pathway for facilities looking to support rehabilitation and skills development programs.
